

Peter Wollen  
Fire and Ice//1984

The aesthetic discussion of photography is dominated by the concept of time. Photographs appear as devices for stopping time and preserving fragments of the past, like flies in amber. Nowhere, of course, is this trend more evident than when still photography is compared with film. The natural, familiar metaphor is that photography is like a point, film like a line. Zeno's paradox: the illusion of movement.

The lover of photography is fascinated both by the instant and by the past. The moment captured in the image is of near-zero duration and located in an ever-receding 'then'. At the same time, the spectator's 'now', the moment of looking at the image, has no fixed duration. It can be extended as long as fascination lasts and endlessly reiterated as long as curiosity returns. This contrasts sharply with film, where the sequence of images is presented to the spectator with a predetermined duration and, in general, is only available at a fixed programme time. It is this difference in the time-base of the two forms that explains, for example, Roland Barthes' antipathy towards the cinema and absorption in the still photograph. Barthes' aesthetic is governed by a prejudice against linear time and especially against narrative, the privileged form of linear time as he saw it, which he regarded with typically high-modernist scorn and disdain. His major work on literature, *S/Z*, is a prolonged deceleration and freeze-framing, so to speak, of Balzac's (very) short story, marked throughout by a bias against the hermeneutic and proaeretic codes (the two constituent codes of narrative) which function in 'irreversible time'.

When Barthes wrote about film he wrote about film stills; when he wrote about theatre he preferred the idea of *tableaux vivants* to that of dramatic development. Photography appeared as a spatial rather than temporal art, vertical rather than horizontal (simultaneity of features rather than consecutiveness) and one which allowed the spectator time to veer away on a train of thought, circle back, traverse and criss-cross the image. Time, for Barthes, should be the prerogative of the reader/spectator: a free rewriting time rather than an imposed reading time.

I don't want, here and now, to launch into a defence of narrative; that can keep for another day. But I do want to suggest that the relationship of photography to time is more complex than is usually allowed. Especially, it is impossible to extract our concept of time completely from the grasp of narrative. This is all the more true when we discuss photography as a form of art rather

than as a scientific or instructional instrument.

First, I am going to talk about 'aspect' rather than 'tense'. (Here I must acknowledge my dependence on and debt to Bernard Comrie's book on 'Aspect', the standard work on the subject). Aspect, on one level, is concerned with duration but this, in itself, is inadequate to explain its functioning. We need semantic categories which distinguish different types of situation, in relation to change (or potential for change) and perspective as well as duration. Comrie distinguishes between states, processes and events. Events themselves can be broken down between durative and punctual events. Alongside these categories aspect also involves the concepts of the iterative, the habitual and the characteristic. It is the interlocking of these underlying semantic categories which determines the various aspectual forms taken by verbs in different languages (*grosso modo*).

It is useful to approach photography in the light of these categories. Is the signified of a photographic image to be seen as a state, a process or an event? That is to say, is it stable, unchanging, or, if it is a changing, dynamic situation, is it seen from outside as conceptually complete, or from inside, as ongoing? (In terms of aspect, stative or perfective/imperfective non-stative?) The fact that images may themselves appear as punctual, virtually without duration, does not mean that the situations that they represent lack any quality of duration or other qualities related to time.

Some light is thrown on these questions by the verb-forms used in captions. (A word of warning: English, unlike French, distinguishes between perfective and imperfective forms, progressive and non-progressive, in the present tense as well as the past. The observations which follow are based on English-language captions). News photographs tend to be captioned with the non-progressive present, in this case, a narrative present, since the reference is to past time. Art photographs are usually captioned with noun-phrases, lacking verb-forms altogether. So also are documentary photographs, though here we do find some use of the progressive present. This imperfective form is used more than usual, for example, in Susan Meiselas' book of photographs, *Nicaragua*. Finally, the imperfective is used throughout in the captions of Muybridge's series photographs, in participle form.

Evidently these choices of verb-form correspond to different intuitions about the subjects or signifieds of the various types of photograph. News photographs are perceived as signifying events. Art photographs and most documentary photographs signify states. Some documentary photographs and Muybridge's series in particular are seen as signifying processes. From what we know about minimal narratives, we might say that an ideal minimal story-form might consist of a documentary photograph, then a news photograph, then an art

photograph (process, event, state). In fact, the classic early film minimal narrative, Lumière's *L'Arroseur arrosé*, does follow this pattern: a man is watering the garden (process), a child comes and stamps on the hose (event), the man is soaked and the garden empty (state). What this implies of course is that the semantic structure of still and moving images may be the same or, at least, similar, in which case it would not be movement but sequencing (editing, *découpage*) which made the main difference by determining duration differently.

Still photographs, then, cannot be seen as narratives in themselves, but as elements of narrative. Different types of still photograph correspond to different types of narrative element. If this conjecture is right, then a documentary photograph would imply the question: 'Is anything going to happen to end or to interrupt this?' A news photograph would imply: 'What was it like just before and what's the result going to be?' An art photograph would imply: 'How did it come to be like this or has it always been the same?' Thus different genres of photography imply different perspectives within durative situations and sequences of situations.

While I was thinking about photography and film, prior to writing, I began playing with the idea that film is like fire, photography is like ice. Film is all light and shadow, incessant motion, transience, flicker, a source of Bachelardian reverie like the flames in the grate. Photography is motionless and frozen, it has the cryogenic power to preserve objects through time without decay. Fire will melt ice, but then the melted ice will put out the fire (like in *Superman III*). Playful, indeed futile, metaphors, yet like all such games anchored in something real.

The time of photographs themselves is one of stasis. They endure. Hence there is a fit between the photographic image which signifies a state and its own signified, whereas we sense something paradoxical about the photograph which signifies an event, like a frozen tongue of fire. In a film, on the contrary, it is the still image (Warhol, Straub-Huillet) which seems paradoxical in the opposite sense: the moving picture of the motionless subject.

Hence the integral relationship between the still photograph and the pose. The subject freezes for the instantaneous exposure to produce a frozen image, state results in state. In *La Chambre claire*, Barthes keeps returning to the mental image of death which shadows the photographs that fascinate him. In fact these particular photographs all show posed subjects. When he treats unposed photographs (Wessing's photograph of Nicaragua, Klein's of May Day in Moscow) Barthes sees not death, even when they show death, but tableaux of history, 'historemes' (to coin a word on the model of his own 'biographemes'). Images, in fact, submitted to the Law.

I can't help wondering whether Barthes ever saw James Van Der Zee's *Harlem Book of the Dead*, with its photographs of the dead posed for the camera

**FILM IS ALL  
LIGHT AND  
SHADOW,  
INCESSANT MOTION,  
TRANSCIENCE, FLICKER,  
A SOURCE OF BACHELARDIAN  
REVERIE LIKE THE FLAMES  
IN THE GRATE.  
PHOTOGRAPHY  
IS MOTIONLESS  
AND FROZEN,  
IT HAS THE CRYOGENIC  
POWER TO PRESERVE OBJECTS  
THROUGH TIME WITHOUT  
DECAY. FIRE WILL MELT ICE,  
BUT THEN THE MELTED ICE  
WILL PUT OUT THE FIRE.**

in funeral parlours: a triple registration of stasis – body, pose, image. The strange thing about these photographs is that, at first glance, there is an eerie similarity between mourners and corpses, each as formal and immobile as the other. Indeed, the interviewers whose questioning of Van Der Zee makes up the written text of the book, ask him why the eyes of the bodies aren't opened, since this would make them look more life-like, virtually indistinguishable from the mourners even to the smallest detail.

This view of death, of course, stresses death as a state rather than an event. Yet we know from news photographs that death can be photographed as an event: the Capa photograph of the Spanish Civil War soldier is the *locus classicus*, taken as he is felled. There is a sense, though, in which Barthes was right. This photograph has become a 'historeme', a 'pregnant moment' after Diderot or Greuze, or like the habitual narrative present in Russian, where, according to Comrie, 'a recurrent sequence of events is narrated as if it were a single sequence, i.e. one instance stands for the whole pattern'. In my book of Capa photographs, it is captioned simply *Spain, 1936*.

The fate of Capa's photograph focuses attention on another important aspect of the way images function in time: their currency, their circulation and recycling. From the moment they are published, images are contextualized and, frequently, if they become famous, they go through a whole history of republication and recontextualization. Far more is involved than the simple doubling of the encounter of photographer with object and spectator with image. There is a very pertinent example of this in the case of Capa's photograph. It is clearly the model for the pivotal image of death in Chris Marker's film *roman La Jetée* – the same toppling body with outstretched arm.

Marker's film is interesting for a lot of reasons. First of all, it is the exemplar of a fascinating combination of film and still: the film made entirely of stills. (In just one image there is an eye-movement, the converse of a freeze frame in a moving picture.) The effect is to demonstrate that movement is not a necessary feature of film; in fact, the impression of movement can be created by the jump-cutting of still images. Moreover, *La Jetée* shows that still photographs, strung together in a chain, can carry a narrative as efficiently as moving pictures, given a shared dependence on a soundtrack.

It is not only a question of narrative, however, but also of fiction. The still photographs carry a fictional diegetic time, set in the future and in the present as past-of-the-future, as well as an in-between near-future from which vantage-point the story is told. Clearly there is no intrinsic 'tense' of the still image, any 'past' in contrast with a filmic 'present', as has often been averred. Still photography, like film (and like some languages), lacks any structure of tense, though it can order and demarcate time.

Aspect, however, is still with us. In the 'past' of memories to which the hero returns (through an experiment in time-travel) the images are all imperfective, moments within ongoing states or processes seen as they occur. But the object of the time-travel is to recover one fixated memory-image, which, it turns out at the climax of the film, is that of the hero's own death. This image, the one based on Capa's *Spain, 1936*, is perfective: it is seen from the outside as a complete action, delimited in time with a beginning and an end. Although *La Jetée* uses a whole sequence of photographs, the single 'Capa' image in itself carries the condensed implication of a whole action, starting, happening and finishing at one virtual point in time: a 'punctual situation', in Comrie's terms. And, at this very point, the subject is split into an observer of himself, in accordance with the aspectual change of perspective.

My own fascination with pictorial narrative is not a recalcitrant fascination, like that of Barthes. Unlike him, I am not always longing for a way of bringing the flow to a stop. It is more a fascination with the way in which the spectator is thrown in and out of the narrative, fixed and unfixed. Traditionally, this is explained in terms of identification, distanciation, and other dramatic devices. Perhaps it is also connected with aspect, a dimension of the semantics of time common to both the still and the moving picture and used in both to place the spectator within or without a narrative.

Peter Wollen, 'Fire and Ice', in *Photographies*, no. 4 (Paris, April 1984) 118–20.
